Instructions for Participants

We are two Computer Engineering students at Kuwait University studying how developers review work produced by AI agents.

You will receive:

- 10 short files (T01–T10): the task, then the agents' conversation up to where you step in.
- A comment sheet (Excel) and a consent form to sign first.

What to do for each file:

- Read the task, then the whole file.
- Check the code, tests, and review comments against the task. Use your own judgement.
- For each problem: say where it is, what is wrong, and how to fix it. Mark where you first saw it (code, tests, or review).
- No problem? Choose "Code is fine" and "No problem".
- Record start/end time and how sure you are.

Rules:

- Go in order (T01–T10) and work alone.
- Read only: don't run the code.
- No AI tools and no online search for the files.
- About 15 minutes per file (2.5 hours total); breaks are fine.

Deadline and how to return

Please return the completed sheet by Tuesday, 3 November 2026, to **Email:** alajmi.munerah@ku.edu.kw . After you submit, we can send you the rest of each conversation if you are interested.
